

1" Low Flow Auto Shut-Off Nozzle

The 1" Low Flow Auto Shut-Off Nozzle is a high quality, heavy duty automatic petrol and diesel nozzle approved for refuelling in resale pumping applications.

Designed for applications where low or high volumes of diesel or petrol need to be dispensed at a time.

Fuel Parts nozzles, are a widely recognised brand of forecourt (retail) style models, known for their careful and quality design and sturdy manufacturing.

Our nozzles, as seen on the forecourt, are high-end fuel nozzles approved for resale dispensing rather than just private applications.

There are a number of models available in our Fuelco Parts nozzle range including automatic shut-off nozzles for diesel, petrol and AdBlue, and manual nozzles for both diesel and chemicals.

Depending upon your application, there is also the choice of high speed petrol and diesel nozzles, as well as a nozzle range designed specifically for gravity fed systems.
